<tbody>
<tr>
<td>A. the acquisition, application and integration of knowledge</td>
</tr>
</tbody>
</table>

#### A.
- Recognize the different ways that animals are present, and the roles they have, in human society;

#### B.
- Describe aspects of the moral, philosophical, and scientific debates in which animals play a major role;

#### C.
- Identify different scientific rationales for human-animal interactions in contributing to the emotional and physical health and well-being of individuals;
- Acknowledge different and alternative philosophical and ethical positions and perspectives to one’s own with a view to fostering multiple perspective-taking and respecting positions opposite to one’s own;

#### D.
- Critically evaluate and reflect on assigned readings for the purpose of synthesizing multiple perspectives to inform opinions;
- Write clear, concise, thoughtful papers;
- Summarize information in an articulate and confident manner for class presentations;

#### E.
- Identify different roles that human-animal interactions have for different societal populations (ie., seniors, individuals with disabilities, etc.);
- Recognize and name many of the complex and diverse role of non-human animals in contemporary society;

#### F.
- Articulate and express disagreement regarding others’ opinions in a respectful, thoughtful manner;

#### G.
- Employ appropriate interaction skills for the purposes of shared discussion, debate, and planning in groups;

#### H.
- Value the unique role animals play in society and the meaningful way in which they continue to contribute to the emotional, psychological, and physical lives of humans.

#### I.
- The ability and desire for continuous learning
